Integrating Cobra for Cost/Earned Value Management in the Oracle Financials Environment

J. Steven Joines
L. Bruce Gibby, PhD

Jet Propulsion Laboratory
California Institute of Technology

Patent Pending ____

Agenda

- **♦** Functional Problems Facing JPL
- Why Cobra Must Be Interfaced To Project Accounting
- Overall Objective Of This Task
- Requirements That Must Be Satisfied
- Shared Data Between Cobra and Oracle
- **♦** Design Constraints
- Architecture Design Solution
- **♦** Major Capabilities of This Architecture
- Upload WBS and Budget Process

Agenda (continued)

- ◆ Cobra Upload Screen
- **♦ JPL Upload Screen In Oracle**
- Challenges Facing The Design Team
- **♦** Functionality Loss When Integrating COTS Software
- **♦** Lessons Learned
- ◆ Future Plans
- **♦** Conclusion
- Questions and Answers

Functional Problems Facing JPL

- ◆ September 1998 -- New NASA prime contract <u>requires</u> EVM
 - JPL home grown budget tool is <u>not</u> capable of EVM
 - Oracle Financial is not capable of EVM
 - Cobra and other COTS tools are capable of EVM
- ◆ NASA Monthly Form 533 Report -- Requires ETC / EAC
 - JPL home grown budget tool is not capable of ETC / EAC
 - Oracle Financials is <u>not</u> capable of ETC / EAC
 - Cobra and other COTS tools are capable of ETC / EAC
- ♦ New Project Management Process Implemented at JPL
 - JPL home grown budget tool does <u>not</u> enable the new process
 - Oracle Financials does not enable the new process
 - * Cobra does enable the new process

Why Cobra Must Be Interfaced To Project Accounting

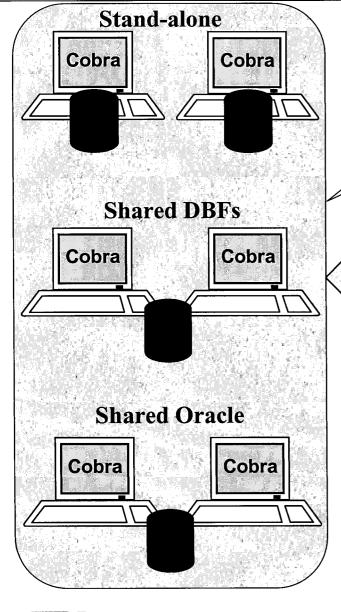

Project Accounting is the source of all actual costs and obligations

JPL's home grown budget tool directly stores budgets in Project Accounting

Overall Objective Of This Task

EVM Analysis
Will Be Done
in Cobra

INTERFACE -

533 Report Will Be Done in Oracle

Requirements That Must Be Satisfied

- Only store approved budgets and approved ETC / EAC in Project Accounting
- Allow immediate storing of Cobra WBSs, budgets, and ETC / EAC in Project Accounting
- Selectively limit storing of Cobra WBSs, budgets, and ETC / EAC in Project Accounting to off-shift hours
- ◆ Provide Cobra with month-end costs and obligations
- Provide Cobra with current OBS, RBS, Labor and Burden Rates, Fiscal Calendar, List of Managers

WelcomWc

Shared Data Between Cobra and Oracle

- **♦**Work Breakdown Structures (WBS)
- **◆**Approved Baseline Budgets
- **◆**Approved ETCs and EACs
- **◆**Actual Costs and Obligations [Encumbrances]
- Global Information
 - Organization Breakdown Structure (OBS)
 - Resources / Expenditure Types (RBS)
 - List of Managers
 - Fiscal Calendar
 - Standard Labor and Burden Rates
 - Project Accounting Flex Fields / Cobra Code Files

Design Constraints

♦Short time frame

♦Restricted cost

A Project Management tool had not been selected

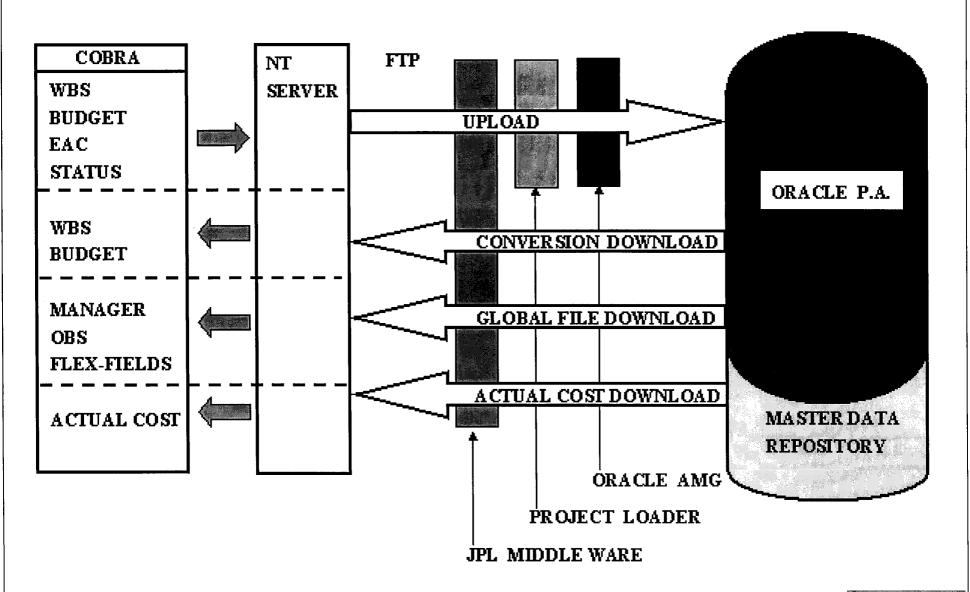

♦JPL's techno-culture

♦Oracle's recommendation to use the AMG

Architecture Design Solution

Major Capabilities Of This Architecture

- Upload WBSs, Approved Baseline Budgets, ETCs / EACs from Cobra
 - Immediate (Ad hoc)
 - Overnight (Batch)
- ◆ Download Actual Costs and Obligations to Cobra
 - Immediate (Ad hoc)
 - Automatically at Month End
- ◆ Download Global Files to Cobra -- When Changes Occur
- **♦** Download Converted WBSs and Approved Oracle Baseline Budgets to Cobra -- *Once Per Project* (Existing and New)

Major Capabilities Of This Architecture (Continued)

- Control and Manage the Application in Oracle
- **♦** Send Email Alerts from Oracle to Cobra Users
- **♦**Nightly Cleanup and Maintenance in Oracle
- **♦**Nightly Data Integrity Reporting in Oracle
- ♦ Monthly "Who's Not Following the Process" Reports in Oracle

Welcom Cobra Extract

-- Create WBS & Budget Flat Files on NT Servers

Oracle Forms -- Submit Unix Upload Script

FTP -- Upload Flat Files To Unix Server

FTP -- Delete Flat Files from NT Servers

PL/SQL -- Edit and Validate Uploaded Files

PL/SQL -- Enforce JPL Business Rules

PL/SQL -- Load Validated Files to Project Partners Tables

PL/SQL -- Read Project Partners Tables

PL/SQL -- Call AMG to Update Project Accounting

PL/SQL -- Analyze Results Returned From AMG

PL/SQL -- Erase Project Partners Tables

Challenges Facing The Design Team

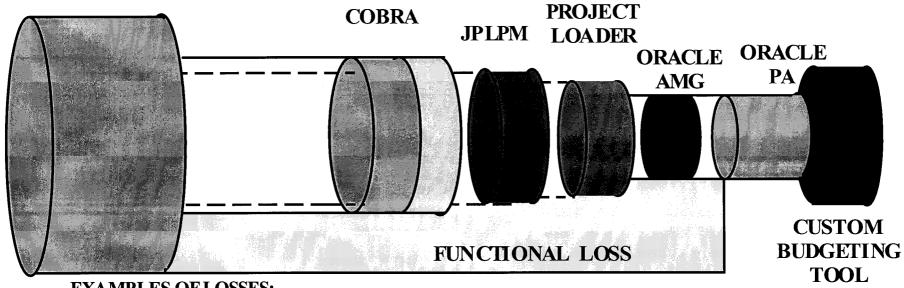

- ◆ Nature of Task Start and End Dates in Project Accounting
- Corrupted Data in Project Accounting
- ◆ Provide Real-Time Feedback to Users When Interacting With Project Accounting
- **♦** Two Sources of WBS and Budget Data Into PA
- ◆ Immediate Notification When Global Files Change in PA
- Functionality Loss When Integrating COTS Software

Functionality Loss When Integrating COTS Software

DESIRED FRONT-END PLANNING CAPABILITY

EXAMPLES OF LOSSES:

Submit approval for individual Task

JPL Line Codes

Cross-Charge Planning

Workforce by actual "heads"

Multiple use of one resource in a task

Automatic rate override/unique rates by task

Lessons Learned

♦ Select All COTS Software Prior to System Design

Clean Up Corrupted Data Prior to System Design

Obtain Company Acceptance of New Business Rules Prior to System Design

Future Plans

- Eliminate FTP Upload and Download
 - Access Unix directly from Windows NT client
- **♦** Eliminate WBS and budget text files
 - Enhance the Cobra Upload program to populate JPL Custom Oracle tables
- Make Cobra the single source of all budget data
 - Phase out JPL's home grown budget tool
- Produce NASA Form 533 and all budget reports from Cobra Data Bases

Conclusion

- ◆ Resulting Architecture is not Glamorous or Cutting Edge but Accomplishes its Objectives
- Architecture is Being Successfully Used by its Intended Customers
- Architecture Design was Greatly Influenced by Available Resources
- Use of COTS Software Greatly Reduced Development Time and Expense
- ◆ Other Architectures Will be Evaluated With End User Throughput Being the Main Consideration
